Message from the Guest Editors

In recent years, biotechnology is assuming an increasingly important role in tree breeding and cloning, through the application of techniques such as somatic embryogenesis, propagation in bioreactors, genetic transformation, proteomics, genomics, and production of synthetic seeds, among many others. Based on these tools, improved trees displaying new features are now in the field assuring higher productivities and helping to preserve natural forests while contributing to fix CO₂ and to avoid desertification, both from an ecological and human perspective. This Special Issue will keep researchers and other stakeholders on the cutting edge of the latest developments in the field of tree biotechnology. Those interested in tree biotechnology are welcome to collaborate and share their more recent results in this field.

Keywords

acclimatization
bioreactors
breeding
cloning
genetic transformation
in vitro
molecular biology
omics
rooting

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access:—free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex, GeoBase, Scopus and other databases.

CiteScore (2019 Scopus data): 2.7, which equals rank 41/140 in the 'Forestry' category.
